

Your experts in plant histology

Wax-it Histology Services Inc. is a GLP-compliant contract research organization that specializes in plant histological solutions for the research community. Our highly-qualified staff have extensive experience performing a wide-range of histological techniques for paraffin-, frozen-, and resin-embedded samples.

As a core outsourcing facility, we are committed to producing consistent, high-quality work with quick turn-around times for all our clients.

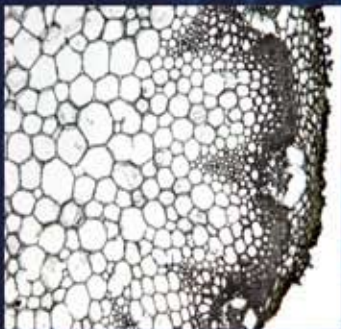

Paraffin Sections

We have developed custom paraffin processing techniques specifically optimized in preserving plant tissue morphology at the highest level.

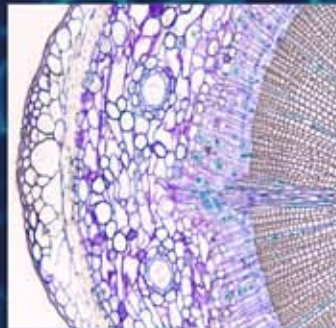

Protocol Development

Don't see a solution that addresses your specific research question? Enquire today as our expert staff can tailor any of our techniques to your individual needs. Whether it is antibody optimization or the development of novel staining techniques, we have the expertise and experience to help you reach your research objectives.

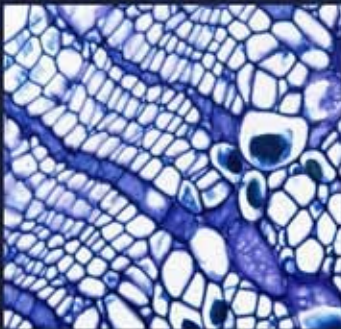

Frozen Sections

We have optimized fixed and fresh frozen embedding techniques to ensure maximum plant tissue integrity is maintained for use in applications such as in situ hybridization and laser microdissection.

Other Services:

Resin Sections
In Situ Hybridization
Immunohistochemistry
Image Processing

Special Stains

Our experienced staff have tailored a number of special stains specifically for plant tissue, including safranin green, PAS, and toluidine blue. Enquire today as many more are available.
