

**CASE STUDY**

**Target Profiling Using Wax-it TissueMacro Array Slides**

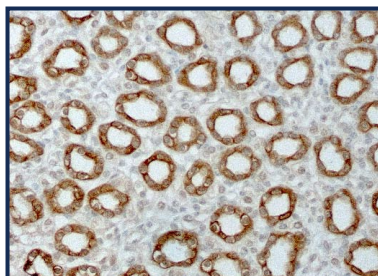

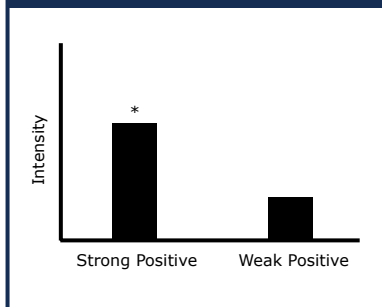

Utilizing our TissueMacroArray slides, a protein target of interest can be rapidly profiled amongst a standard complement of representative animal tissues. This allows for generation of data sets describing the localization of your target protein within the major tissues of an animal model.

1. TissueMacroArray slides contain 15-20 representative tissues from an animal model
2. These individual multi-tissue array slides ensure consistent, reproducible immunostaining
3. Digital imaging and semi-quantitative scoring permit rapid pathological report generation

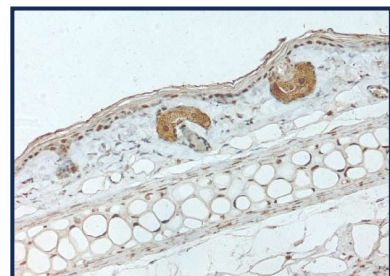

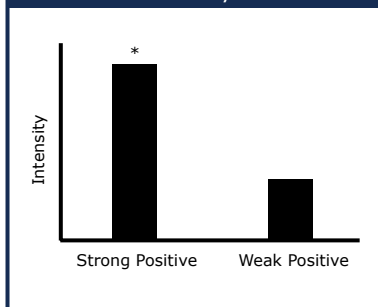

**Wistar Male Mouse TissueMacroArray Slide Immunostained with JAG-1**

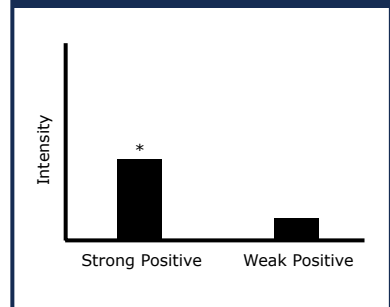

Brain

Kidney

Skin

**PATHOLOGY REPORT**

**SPECIES CURRENTLY AVAILABLE:**  
primate, mouse, rat, pig, and rabbit

**Request more information!**

**The Wax-it Referral Program:**

Refer a colleague to Wax-it and receive a \$100 **Starbucks gift card** \*\*

**MOVING? HAS YOUR CONTACT INFORMATION CHANGED?**

Please update us with your new contact information and receive a **\$20 Starbucks gift card!**

\*\* Colleague must be a new client to Wax-it Histology Services and must have a project value of at least \$200 to qualify. Gift card will be issued once the referred colleague's new project has been delivered to Wax-it. Valid 1 gift card per academic research lab or company.
